

DataGear

Data Protection Education

An educational platform proposal by Marzan Karim, Shelly Parra,
Harveen Kapoor, Adrien Rozario, and Illia Polishchuk

Introduction - Team

Our team consists of aspiring entrepreneurs with a keen interest in solving a common problem: unsafe data security practices.

Introduction - Project

Our project, *DataGear*, is an educational web app designed to provide inexperienced technology users with accessible, actionable cybersecurity knowledge. As people increasingly rely on online platforms to manage their personal and professional lives, many remain unaware of how easily their data can be compromised.

Our goal is to help these users develop safer digital habits, recognize threats, and make informed decisions about their personal data.

Equip

yourself with safer digital habits

Defend

your devices against threats

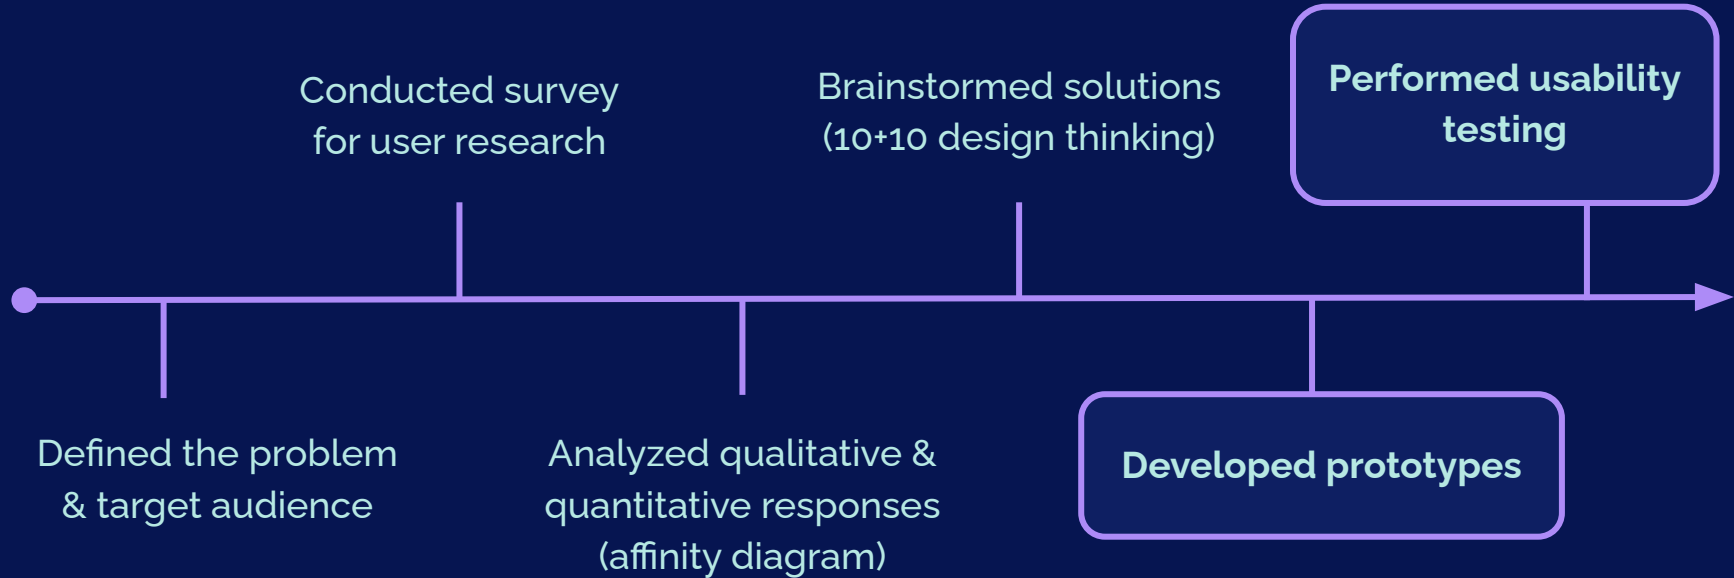

Protect

your personal information online

Development Process

Current Progress

- ☐ Prototypes are finished: low-fidelity and high-fidelity.
- ☐ Key screens are complete: Login/Signup, Homepage, Learning, Modules, Settings, Dashboard
- ☐ Additional features are included: Progress Tracking, Account Management, Module tabs, Module tab features
- ☐ UI flow is finalized and fully mapped
- ☐ Content plan is defined: modules for beginner, intermediate, and advanced users
- ☐ Accessibility is considered: text sizing and voice narration in Settings
- ☐ Usability testing is performed: 5 users completed 2 tasks on the prototype

Prototype - Low Fidelity

Prototype - High Fidelity

Usability Testing Results

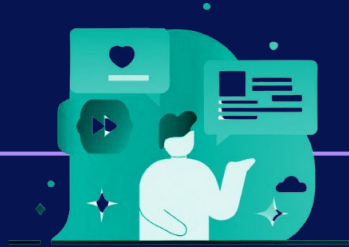

What worked well according to user testing:

- Difficulty levels helped beginners
- Read, watch, learn structure helped different learning styles
- Clear and easy to understand interface
- Accessibility features are accommodating

What to improve according to user feedback:

- Map clear learning paths
 - Personalize Dashboard with recommended Modules
 - Highlight important topics in Modules
 - Add additional languages in Settings
- 

Next Steps - 1

Further develop dashboard

Supported by: user feedback requested more guidance from the system

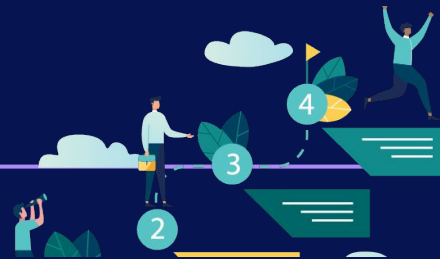

Next step: implement an algorithm that recommends content based on user's completed content and performance (on quizzes)

Add a quick feedback feature after each module - ask the user to rate the learning experience

Next Steps - 2

Add more cohesive content

Supported by: users say to mention the importance of cybersecurity and privacy concepts and provide suggested learning paths as a place to start

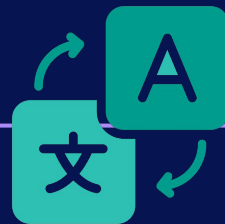

Next Step: implement predefined learning paths that could help people find a beginner-friendly starting point

At the top of each module, the concept is and its importance will be explained

Next Steps - 3

Expand accessibility

Supported by: user feedback mentioned their preference in Spanish.

Next Step: add a setting that would allow users to transcribe the app into their preferred language

Incorporate predefined translations of the app

Research Plan

01

Iterative Testing &
Final Development

02

Increase & Diversify
User Testing

03

Interactive, Accessible
Cybersecurity Education

04

Partnerships

Department of Education

★ *app aligns with media literacy goals*

Proposed Budget

Thank you

For your time

We hope you consider our proposal
